

# Give your project that little bit extra!

Timbmet specialise in the supply of high quality Veneered panels, offering an extensive variety of species, grain, cuts and colours across a range of core boards.

## Veneered MDF – Un-finished

Veneered MDF panels are constructed from real wood face veneers bonded to an easily machinable MDF core board. This gives the effect of solid wood but at a reduced cost and with enlarged scope for application. Different slicing processes produce different decorative grain patterns whilst the base material maintains shape and strength.

Our stock range consists of both commercial and superior grade A/B veneers, suitable for a broad range of projects including furniture manufacture, interior fit out, shop fitting and wall panelling. Further enhanced grades or different slicing and jointing techniques, are also available on a variety of MDF boards including moisture resistant and flame retardant options.

Timbmet hold an extensive stock of veneer species and thicknesses from 4mm to 51mm in different panel sizes to meet customer demand and expectation.

We have recently introduced White Oak veneer on both moisture resistant and fire rated core boards!

We also offer a bespoke veneering service to customers requirements.

## Veneered MDF – Pre-Lacquered

Need a finished veneer product? Look no further than our pre-lacquered range of White Oak and Black Walnut veneered MDF.

We also offer matching edging for all of our pre-lacquered veneered panels.

## Veneered Plywood

To complement our veneered MDF range we also offer a range of high quality plywood boards with an attractive veneer finish. Our stock includes Birch, Poplar and far eastern core boards.

Commonly used for furniture manufacture, wall panelling and other general construction projects where the face grade is important. We supply a range of species in both double sided and single sided options and in thicknesses from 6mm to 25mm.

## Flexi Veneer

Our flexible veneer to match all of our veneered board stocks is ideal for surfacing curved areas and for adding a superior appearance and finish to those projects that require added flexibility.

Our long grain flexi veneer is on a paper backing ready for fixing to almost any substrate. This veneer is not supplied pre-glued.

## We've Got The Edge

Complete your project with our real wood veneered edging, available to match all of our veneer range. Our stock range consists of both pre-glued 0.4mm veneer edging from 22mm to 50mm in width and also un-glued thickwood edging from 1mm to 3mm in thickness and 22mm to 29mm in width.
