Creativity is inside

Interior spaces are those which are most intimately related to people; these are the places that welcome us, where life occurs with all its richness and variety of use. That is why interior design always goes hand in hand with creativity: because of its capacity to nuance spaces, to make them fit the uses and functions they are assigned, to give them personality and identity.

you

Every space, be it diaphanous or complex, bright or with controlled light, for work or for play, domestic or public, every space, every place, has an idea behind it: your idea. Creativity is the tool you use every day, and Fibracour E-Z the material that helps your ideas become real.

Creativity

The impulse to create is one of the things that make us human.

We can build what we need and imagine, from something that emerged from a first idea. Creativity is a two-way path, of progress and setbacks, of ups and downs.

The essential, when the time comes, is to have the right materials to make our ideas come true.

Colour

Colour is one of the primary tools for shading and defining the character of an interior space. From sophisticated, neutral and elegant spaces to warm, vivid and full of character interiors, colour conditions our perception and gives every place a unique identity. The Fibracolour E-Z range of decorative panels (MDF), completely coloured, offers a broad variety of colours to define the chromatic character of an interior space using the product's surfaces and edges.

Flexibility

By definition, creativity must be free. Without fixed rules or dogmas. In addition, our current times call for systems that enable variety, combinations, and flexibility. The scalable is more in demand than the predefined, the adaptable than the rigid, the customised than the standard. The Fibracolour E-Z Range, combined with other FINSA ranges and the application of different finishes, offers a very wide catalogue of decorative solutions to satisfy the requirements of any interior space.

Interior space

Interior design can activate all of our senses and make us feel comfortable in our own houses, productive in our working spaces, or happy when we are having fun: a different interior for every situation.

This is why every space, every interior calls for specific solutions for unique demands. The wide range of Fibracolour E-Z boards and panels allow you to find the ideal solution to the demands of all interior design projects.

Fibracolour E-Z + DUO Range

The decorative possibilities of the Fibracolour E-Z Range increase almost unlimitedly when used in coordination with the DUO Range of FINSA melamines. The rich catalogue of designs, colours and textures –from rustic woods to elegant and sophisticated solutions–, combined with the panels' coloured edges, offers a new decorative dimension full of originality and differentiation.

Fibracolour E-Z + Studio Natur

The idea of comfort and wellbeing that we associate with an interior space is often related to the use of wood. Its sensory characteristics, both visual and tactile, and even its sound and aroma, transcend the enumeration of simple list of attributes and we feel them as part of a way and culture of living.

The Studio Natur Range of wooden veneer from FINSA, with its large catalogue of available woods, in combination with the Fibracolour E-Z Range, allows us to add the warmth, elegance and sophistication of wood to any interior space.

Fibracolour E-Z TEX

The effect of light on the surfaces we inhabit is what defines the character of a wall, or the presence of a volume. Textures are not only touched, they are seen. Fibracolour E-Z TEX is the natural evolution of FINSA decorative panels. The application of relief textures to one of the Fibracolour E-Z panel surfaces enables the use of a broad and novel set of decorative solutions. Combined with surface treatments, such as lacquer, varnish and sandpaper, it increases its versatility and capacity for customisation.

Finishes

Nowadays, interior design and ephemeral architecture have to answer to increasingly complex demands and requirements. Novel demands are now being added to the usual decorative requirements, such as labelling, signalling or printing applied directly over construction surfaces and with no later addons.

Fibracolour E-Z allows multiple finishes on its surface: digital printing, lacquer, varnishes or pantograph. Over the Twicolour E-Z panel, in addition, the pantograph technique can reveal the soul colour of the panel itself.

Fibracolour E-Z

The Fibracolour E-Z Range from FINSA consists of decorative wood fibre panels (MDF), completely coloured. This proposal includes Fibracolour Black and Gray E-Z, and the latest launches in Yellow, Blue, Red and Anthracite E-Z. Fibracolour E-Z offers possibilities in the field of decoration and interior design, opening the door to a wide variety of aesthetic effects and to the application of innovative finishes, such as lacquers,

waxes, varnishes, pantograph techniques, digital printing or the application of surface textures. Fibracolour E-Z can also be covered with a natural or melamine veneer, creating an attractive contrast between the product's surface and coloured edges. Our Fibracolour supports are of E-Z quality. This property means the panels contain a very low level of formaldehyde.

Fibracolour E-Z + DUO Range

The combination of Fibracolour E-Z with the large Duo Range of FINSA melamines will help you to face the challenge of expressing the character of any interior space. The possibilities for customisation are almost unlimited, due to the combination of the coloured edges of the product and the wide array of available melamines for surfaces, from rustic wood designs to elegant and sophisticated structures. An extensive range of colours,

from the more neutral to the more vivid and intense, plus a large number of abstract designs inspired by textile and metallised materials, hydraulic mosaics, or surfaces such as cement or marble.

Fibracolour E-Z TEX

Fibracolour E-Z TEX is a new range of decorative panels developed from Fibracolour E-Z by applying different relief textures to the surface. This feature boosts its decorative qualities, and when combined with lacquers or varnishes, the possibilities for customisation are unlimited.

Fibracolour E-Z TEX enriches the material and sensory characteristics of any interior space through a varied offer of relief surfaces.

The different textures and linear, geometrical or fantasy shapes offer great versatility to adapt to different spaces or decorative applications. All panels synchronise the reproduction of textures throughout the whole surface, facilitating cutting, mechanisation or panellisation in different applications.

Twincolour E-Z

Twincolour E-Z is a MDF wood fibre board composed of two Fibracolour Black E-Z layers of 3 mm thickness in the exterior faces, and an interior 10 mm board from the Fibracolour E-Z Range. Its physical characteristics make Twincolour E-Z an ideal board for original and unconventional decorative solutions, such as pantograph techniques or making grooves in the exterior faces of the panel to highlight the interior, composed of some of

the Fibracolour E-Z Range coloured panels. Fibracolour Twincolour E-Z is a product made from non-toxic, water-based pigments and low emissions of formaldehyde (E1 classification), which guarantees a perfect and safe coexistence with the environment and is an ideal alternative for use in closed spaces.

Available from one panel. Contact our sales network for more information

Greenpanel Black E-Z

Greenpanel Black E-Z is an innovative ultralight panel, manufactured with Fibracolour Black E-Z, that has been developed for applications that require the unique combination of low weight and high resistance. The Greenpanel panel is manufactured with low board thickness Fibracolour Black E-Z board faces and an interior organised into cells. The non-covered edge gives it great aesthetic personality for its use in interior design.

Its thickness and high dimensional stability make it ideal for use and application in furniture, shelving, mobile panels, floating ceilings, stands, exhibits and ephemeral architecture.

Due to the continuous development of the product and the regulations that govern its production, some parameters may be altered. For more information, or to download the full technical sheets, visit our website at www.finsa.com

Applications

The Fibracolour E-Z Range of products is ideal for the following applications:

Commercial spaces

Showcases, counters and displays

Technical solutions

Manufacturing of acoustic elements and moulding, bas-relief effects, product design

Design

Excellent performance as a support for digital technology printing. Application of original and innovative finishes based on lacquers or varnishes or surface pantograph techniques.

Ephemeral architecture

Stands and exhibit supports

Interior design

Panels, partitions and decorative covers

Furniture

Home, auxiliary, office and children furniture

The Fibracolour Playground sample collection allows you to stimulate your creativity, experiment, and appreciate the physical characteristics of Fibracolour E-Z panels and their possible combinations. Develop your own Fibracolour E-Z creation and share it on social media with the hashtag #FibracolourChallenge
